The Transformation in Software Licensing Explained

In his article in the Better Software Techweb magazine, Oinkamath Muniyale, Business Development Director at SafeNet, explains how the software licensing industry is undergoing a major change and how it is affecting software companies and the way they operate. He also explains how the evolution in software monetization. "The rapid adoption and proliferation of cloud computing is probably the single most disruptive technological force of this millennium so far" explains Oinkamath. "The cloud, along with advancements in mobile technology and Internet of Things devices, promises to radically change the way business is conducted. This change opens the entire software industry value chain, including development methodologies, software delivery, new business models, and customer expectations. Needless to say, this has, in turn, transformed the way companies monetize their offerings and go to market with their software solutions. The software application market is more crowded than ever. For almost every commercially available software app, the trend is to enable editions on a wide range of platforms: an on-premise version, a cloud-delivered version, and a software-as-a-service version. Software providers are looking at not only every possible avenue to grow revenues from their current client base but also ways to expand into new markets. The next generation of software monetization is not limited to protection and licensing. It's about growth and enabling new business models."

Does your software monetization strategy enable new business models? Does it open the door to new markets? Download the latest issue of Better Software magazine to read Oinkamath's full article on the evolution of software licensing and learn about the 6 levers driving the transformation in the industry.

LicensingLive! 2014 Recap

This year's industry-known LicensingLive! event took place in late October, focusing on licensing and entitlement developments within the software monetization industry. Industry analysts – including Amy Konary (IDC), Jeff Kaplan (THINKstrategies) as well as thought leader Ray Wang (Constellation Research) joined software vendors Towers Watson, Progress and HID Global to discuss:

- Revenue opportunities in the top licensing and packaging trends
- Application delivery in the IoT
- The Sharing Economy – matching what end users want and what drives revenue
- Real-Life Case Studies: Challenges and Solutions

The event closed with a round table discussion moderated by Rimma Cuiller, Vice President Software Division, SIIA.

To see the presentations and learn more about previous years' events, go to the LicensingLive! website.

Live! Webcast: What is the right license model for your business?

SafeNet's last quarterly Ask the Experts webcast focused on finding the "Right License Model for Your Business", and featured guest Human Jones VP, Principal Analyst at Forrester Research Inc. and Dave DiMillo, Principal Consultant at SafeNet.

Click here to view the recorded session and learn about:

- Price Vs perceived value
- The importance of understanding WHAT you want to monetize on
- Pros and Cons of various pricing models
- Usage as the base for the model of your choice
- Real life case studies

SafeNet's Ask the Experts is a quarterly webcast series introducing new trends in the licensing, entitlement and protection space.

Sentinel EMS 3.0, the latest release of SafeNet's Entitlement Management System, with new and improved features!

Sentinel EMS is a web-based solution that provides software publishers with a centralized tool for all license and entitlement management functions, a simple interface to their back office systems, and a variety of advanced data collection and reporting functions. These features enable customers to improve business operations thereby enhancing the end-user experience and maximizing profitability. Sentinel EMS can be hosted on premise or on Sentinel Managed Application Hosting Services for improved delivery, reliability and security.

The latest release of Sentinel EMS includes several new features and improvements, including:

- Channel Enhancements – the channel enhancements in EMS 3.0 allow for multi-tier channel support, enabling end users and channel partners to interact and do self-service instead of relying on you, the software publisher.
- Cloud Licensing – now that EMS supports cloud licensing, software publishers can administer and control both on-premise and cloud entitlements from the same entitlement management system.
- EMS Web Services – software publishers can now automate the definition of downloadable content into EMS using our new web services, preventing manual error and improving efficiencies.

Click here to learn more about Sentinel EMS, or contact your sales representative to upgrade to Sentinel EMS 3.0.

Sentinel LDK 7.2, SafeNet's next-generation out-of-the-box Software Protection, Licensing, and Entitlement Management System, is now available!

Sentinel LDK delivers software publishers a comprehensive, out-of-the-box software monetization solution that enables them to protect their software and simplify operational processes while enhancing the end-user experience.

Sentinel LDK 7.2 unveils the following new features:

- Virtual Clock (V-Clock) – V-Clock allows Sentinel HL keys, including those without a Real-Time Clock, to support time-based licensing. Now for the first time, you can offer your customers time based licenses with Max, Pro, Net, Drive and Time.
- VM Live Migration – you can now allow your customers to continue to use your software uninterrupted even when the virtual machine that hosts the software is migrated between different physical machines.

Click here to learn more about Sentinel LDK, or download the latest version now!

SafeNet in the News

Whether you are looking for software monetization in the Internet of Things era, or customer analytics for better profitability – SafeNet has a solution, and the industry knows it! In the last quarter, SafeNet was featured in many online publications across the web:

Software Monetization and the Cloud - Compliance is Key

"There are two very hot topics in the areas of software security and software monetization and they happen to use the same terminology even if they do not apply precisely to the same things..."

Is software monetization 2.0 a developer wake up call?

"As a committed reporting resource dedicated to examining the manifold machinations and maneuverings across the software application developer landscape, the Computer Weekly Developer Network recently sat down with the communications team for information security company SafeNet..."

DDoS must-read white paper

"Back in June 2013, Blizor Research director Philip Lieberman was doing a blog summarising some of the main learnings from his company's recent survey of the Independent software vendor (ISV) market.

"Perhaps the most interesting statistic was that 70% of ISVs were still just concentrating on traditional applications that impose current processes, rather than on developing applications that enabled new ways of working," he wrote..."

Protection of intellectual property is ongoing battle

"The battle against software piracy has been ongoing for years and shows no sign of letting up. As the stakes continue to rise, the creative sector of the UK economy continues to need protection..."
